Introduction to HTML

- ☐ **HTML** - HyperText Markup Language
- ☐ It is the language used for creating web pages and web applications.
- ☐ It structures the content on the web, allowing browsers to interpret and display the content correctly
- ☐ A web page primarily consists of two parts:
 - ☐ The data of the webpage (text, sound, images...)
 - ☐ HTML tags are used to format and describe how the data is displayed on the browser

Browser, Editor

Browser

Editor

Notepad

NOTEPAD++

Visual Studio .NET

Example of an HTML document

```
<!DOCTYPE html>
<html>
<head>
  <title>Welcome to HTML</title>
  <style>
    body
    {
      background-color: Orange;
    }
  </style>
</head>
<body>
  <h3>
    Hello World !</h3>
</body>
</html>
```

Hello World !

HTML Versions

- ❑ As stipulated by the W3C organization
- ❑ The basic standards:
 - ❑ HTML 4.01
 - ❑ XHTML 1.0 Transitional
 - ❑ XHTML 1.0 Strict
 - ❑ XHTML 1.1
 - ❑ HTML 5

How to check if the HTML document is written to standard?

<http://validator.w3.org/>

HTML tags

- ❑ <open tag> **Data** </close tag>
- ❑ Tag name → always mnemonic
 - ❑ Example: **b** ~ Bold, *i* ~ Italic, **p** ~ Paragraph
- ❑ Tags include both self-closing tags **
, **<hr/>

** This string of characters is bolded **

- ❑ General Syntax

<tagname AttributeName="value"> Data </tagname>

- ❑ Example:

- ❑ <div> Web Application Development </div>

- ❑ <div id="txtDiv" style="color:#0000CC"> Web Application Development </div>

Syntax

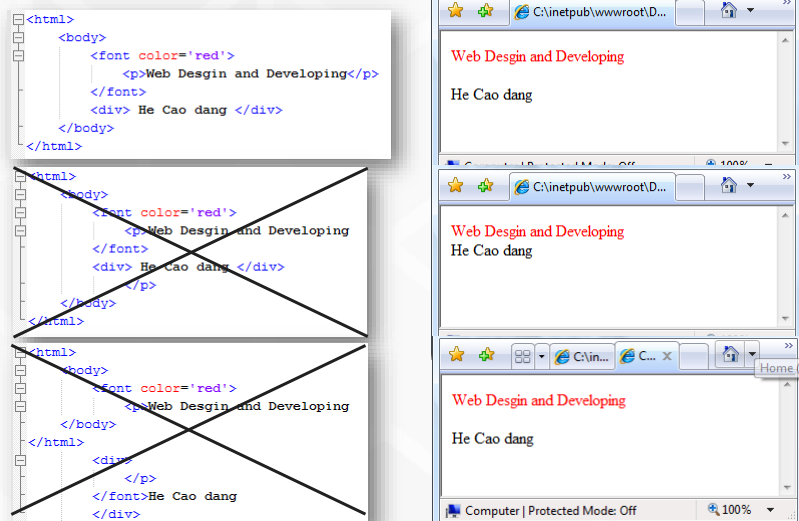

| HTML code | Display |
|------------------------------------------------------------------------|----------------------------------------------|
| <code> This is a line of text that is Bolded</code> | This is a line of text that is Bolded |
| <code><h3> Text at heading level 3 </h3></code> | Text at heading level 3 |

Notes:

- The value of the Attribute of the Tag **must be** placed in double quotes
- Does not distinguish between **uppercase** and **lowercase**, must be written in lowercase
- Ignore [extra spaces and line breaks, new lines](#)

Syntax

❑ Note: Tags must be absolutely nested

Challenge

```
<!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Transitional//EN"
"http://www.w3.org/TR/xhtml1/DTD/xhtml1-transitional.dtd">
<html xmlns="http://www.w3.org/1999/xhtml">
<head>
  <title>Welcome to HTML</title>
  <style type="text/css">
    body
    {
      background-color: Orange;
    }
  </style>
</head>
<body>
  <h3>
    Hello World ! </h3>
</body>
</html>
```

How many HTML
tags are there?

XHTML Standard

❑ **XHTML** = HTML + XML

❑ All opening HTML tags must have a closing tag

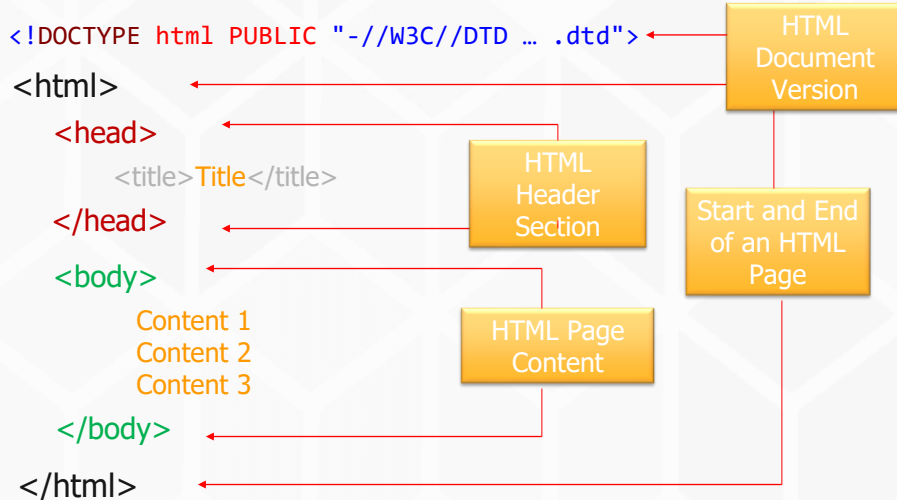

❑ Example:

| | | |
|-----------|---|-----------|
| ❑ | → | |
| ❑ <hr> | → | <hr /> |
| ❑ | → | |
| ❑ <input> | → | <input /> |

Contents

- ❑ Link Tags
- ❑ Table

HTML Document Structure

HTML Document Structure

- ❑ **DOCTYPE** : Defines the document type and version of HTML
- ❑ `<html></html>` : Wraps the entire content of the document
- ❑ `<head></head>` : Contains meta-information about the document, link to CSS stylesheets, character set declarations, and more
- ❑ `<title></title>` : Specifies the title of the HTML document
- ❑ `<body></body>` : Contains the visible content of the HTML document, such as text, images, links, etc

Example

```
<!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Transitional//EN"
"http://www.w3.org/TR/xhtml1/DTD/xhtml1-transitional.dtd">
<html xmlns="http://www.w3.org/1999/xhtml">
<head>
  <title>Welcome to HTML</title>
  <style type="text/css">
    body
    {
      background-color: Orange;
    }
  </style>
</head>
<body>
  <h3>
    Hello World !</h3>
</body>
</html>
```

Example

```
<!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Transitional//EN"
"http://www.w3.org/TR/xhtml1/DTD/xhtml1-transitional.dtd">
<html xmlns="http://www.w3.org/1999/xhtml">
<head>
  <title>Welcome to HTML</title>
  <style type="text/css">
    body
    {
      background-color: Orange;
    }
  </style>
</head>
<body>
  <h3>
    Hello World !</h3>
</body>
</html>
```

Contents

- ☐ Introduction to HTML
- ☐ HTML Document Structure
- ☐ **Basic Tags**
- ☐ List Tags
- ☐ Link Tags
- ☐ Table

Basic Tags

- ☐ Declaration and Document Structure Tags
- ☐ Heading and Text Tags
- ☐ Image Tags
- ☐ Container Tags

Declaration and Document Structure Tags

- ☐ **<!DOCTYPE html>**: Declares the document type and HTML version.
- ☐ **<html>**: Defines the beginning and end of an HTML document.
- ☐ **<head>**: Contains meta information about the document and links to other resources like CSS and JavaScript.
- ☐ **<body>**: Contains the actual content of the document, such as text, images, and links.

Heading and Text Tags

❑ Block Text Formatting Tags

- ❑ Heading: `<h1>`, `<h2>`, `<h3>`, `<h4>`, `<h5>`, `<h6>`
- ❑ Paragraph: `<p>`
- ❑ List Item: ``
- ❑ Horizontal Rule: `<hr />`

❑ Inline Text Formatting Tags

- ❑ Text formatting: ``, `<i>`, `` and ``
- ❑ Create hyperlinks: `<a>`
- ❑ Line break: `
`

Browsers automatically normalize text

```
<html>
<head>
  <title></title>
</head>
<body>
  Trường      Đại học

  Khoa

  Học      Tự Nhiên
</body>
</html>
```

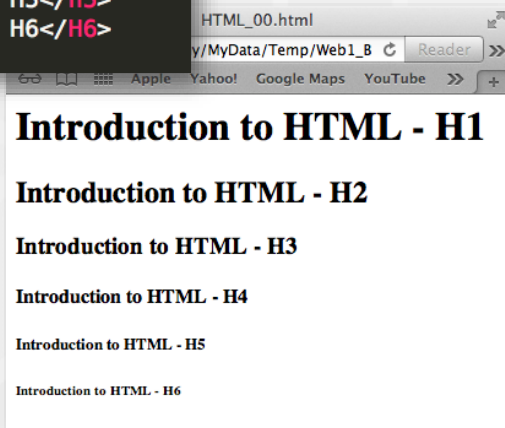

Line break

```
<html>
<head>
  <title></title>
</head>
<body>
  Trường Đại học <br />
  Khoa Học Tự Nhiên
</body>
</html>
```

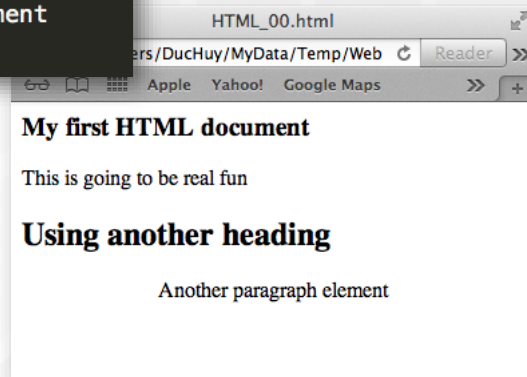

Heading

```
<h1>Introduction to HTML - H1</h1>
<h2>Introduction to HTML - H2</h2>
<h3>Introduction to HTML - H3</h3>
<h4>Introduction to HTML - H4</h4>
<h5>Introduction to HTML - H5</h5>
<h6>Introduction to HTML - H6</h6>
```

Paragraph

```
<h3>My first HTML document</h3>
<p>
  This is going to be real fun
  <h2>Using another heading</h2>
</p>
<p align="center">
  Another paragraph element
</p>
```

Horizontal Rule <hr />

Attributes:

- ☐ **align**: Specifies the alignment of the horizontal rule within its containing element
- ☐ **width**: Specifies the width of the horizontal rule
- ☐ **size**: Specifies the thickness or height of the horizontal rule
- ☐ **color**: Sets the color of the HR
- ☐ **noshade**

```
<hr noshade size="5"
  align="center"
  width="40%" />

<hr size="15"
  align="right"
  width="80%" />
```

Example Text formatting

```
<b>This text is bold</b>
<strong>
  This text is strong
</strong> <br />
<big>
  This text is big
</big> <br />
<em>
  This text is emphasized
</em> <br />
<i>
  This text is italic
</i> <br />
<small>
  This text is small
</small> <br />
This text contains a<sub>2</sub>
<br />
This text contains x<sup>2</sup> = a x a
```

Renders as emphasized text **Renders as strong emphasized text** *Defines a definition term* Defines computer code text Defines keyboard text *Defines a variable part of a text* *Defines a citation* Computer Sciences ~~Computer Sciences~~ Computer Sciences Defines sample computer code

Preformatted Text

- It is used to display text exactly as it appears in the HTML source code

Example:

```
<FONT SIZE=4>
```

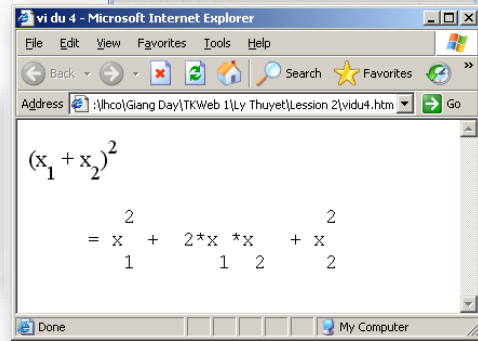

```
<pre>
```

```
Ban co the xuong dong
va cach khoang trang  thoi mai
```

```
</pre>
```

```
</FONT>
```

```
<html>
<head><title> vi du 4 </title></head>
<body>
{x<sub>1</sub> + x<sub>2</sub>}<sup>2</sup>
<pre>
      2      2
    = x  + 2*x *x  + x
      1      1 2    2
</pre>
</body>
</html>
```

Example tag <pre>

```
(x<sub>1</sub> + x<sub>2</sub>)<sup>2</sup>
<pre>
      2      2
    = x  + 2 * x * x  + x
      1      1 2    2
</pre>
```

Special Characters

- ☐ How to display special characters?
- ☐ Special characters: **<, >, &**
- ☐ Double quotation marks **"**
- ☐ Specific symbols: **@ © ®**
- ☐

List of Special Characters

| Result | Description | Entity Name | Entity Number |
|--------|----------------|-------------|---------------|
| " | quotation mark | " | " |
| & | ampersand | & | & |
| < | less-than | < | < |
| > | greater-than | > | > |

To display `<Khoa hoc tu nhien>` "Khoa hoc tu nhien"
the corresponding HTML code is:

[illegible]

Reference: http://en.wikipedia.org/wiki/List_of_XML_and_HTML_character_entity_references

Image Tags

- ❑ **** : It is a self-closing tag
- ❑ Some of the most commonly used attributes for the tag:
 - ❑ **src**: This is a required attribute that specifies the URL or file path to the image you want to display
 - ❑ **alt** : Also required, this attribute provides alternative text for the image. It's displayed if the image cannot be loaded and is important for accessibility
 - ❑ **align**: Determines the alignment of the image with respect to surrounding text. Common values are "left," "right," "top," "middle," and "bottom."
 - ❑ **boder**: Sets the width of a border around the image (default=0)
 - ❑ **width**: Specifies the width of the image in pixels
 - ❑ **height**: Specifies the height of the image in pixels

Image Tags

| HTML Tag | Explanation |
|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | It is used to embed images into a web page |
| <map> | It is used in conjunction with the <area> and tags to create clickable image maps. An image map allows you to define multiple clickable regions on an image, where each region links to a different URL or performs a specific action when clicked |
| <area> | It is used to define individual clickable areas within an image map created using the <map> tag. Each <area> element defines a specific region on an image, and when a user clicks within that region, it triggers an action, such as opening a link or executing a JavaScript function |

Example

```
<html>
  <head>
    <title>Demo Tag IMG</title>
  </head>
  <body>
    
  </body>
</html>
```

Example of Setting a Background Image for a Website

```
<html>
  <head>
    <title>Demo anh nen</title>
  </head>
  <body background="images/Koala.jpg">
    <h1>Gấu hết chết</h1>
  </body>
</html>
```

```
<html>
  <head>
    <title>Demo anh nen</title>
  </head>
  <body background="http://what9see.edublogs.
    org/files/2012/02/valentines-day-wallpaper-upt8kd.jpg">
    <h1>Happy Valentine day</h1>
  </body>
</html>
```

URL

□ Types of HTTP Addresses: 7 cases

Case1: <http://server/>

Example: <http://www.yahoo.com/>

Case2: <http://server/file>

Example: <http://games.yahoo.com/index.php>

Case3: <http://server/directory/>

Example: <http://games.yahoo.com/games/>

Case4: <http://server/directory/file>

Example: <http://games.yahoo.com/download/Dominoes.exe>

URL

Case5: <http://server/directory/file#marker>

Example: <http://games.yahoo.com/index.php#Puzzle>

Case6: <http://server/directory/file?parameters>

Example: <http://www.google.com.vn/search?hl=vi&q=Teach&meta=1>

Case7: <http://server:port/directory/file>

Example: <http://www.microsoft.com:8080/products/greetings.html>

Tag <a> (anchor)

☐ Syntax:

```
<a href="URL" target="..."> Linked content </a>
```

☐ The “target” attribute of the <a> tag can take several values:

- ☐ 'name': You can specify a custom name for the target window or frame
- ☐ _blank: This value opens the linked content in a new, unnamed browser window or tab
- ☐ _parent: If the web page containing the link is inside a frameset or iframe, this value opens the linked content in the parent frame
- ☐ _self (default): It opens the linked content in the same browser window or tab.
- ☐ _top: this value opens the linked content in the top-level frame, breaking out of all nested frames

☐ Example:

```
<html>
<body>
  <a href='http://www.yahoo.com'>www.yahoo.com</a>
</body>
</html>
```

Link Classification

- ☐ Internal Links
- ☐ External Links
- ☐ Email Links
- ☐ Navigation Links
- ☐ Footer Links
- ☐ Download Links
- ☐ Social Media Links
- ☐ Anchor Links
- ☐ Image Links

External Link

Email Link

URL Classification

❑ URLs (Uniform Resource Locators) can be classified into two main categories:

- ❑ **Absolute URLs:** An absolute URL provides the complete and full address of a resource on the internet. It includes the scheme (e.g., "http," "https," "ftp"), the hostname (domain name or IP address), and the path to the resource.
- ❑ **Relative URLs:** A relative URL specifies the location of a resource in relation to the current webpage's location. It doesn't include the scheme or hostname..

```
<a href="URL" target="....."> Linked content </a>
```

Notations of Relative URLs

| Notation | Description |
|----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| No Notation (Path Only) | If a URL does not start with any notation or special character, it is treated as a relative URL and represents a resource within the same directory as the current webpage. |
| / | Using a single forward slash / at the beginning of a relative URL makes it root-relative. It starts navigation from the root directory of the website, regardless of the current webpage's location |
| ./ | The ./ notation represents the current directory where the current webpage is located |
| ../ | The ../ notation represents the parent directory of the current directory |
| # | When used at the end of a URL, the # notation is used for fragment identifiers within the same webpage |

Example

root # 127.0.0.1/demo

file A has a link to file B, so in file A, there is an HTML element:

link to B

URL =

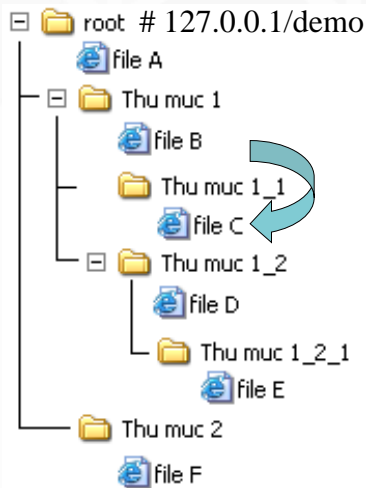

<http://127.0.0.1/demo/Thu muc 1/file B.htm>

</demo/Thu muc 1/file B.htm>

<./Thu muc 1/file B.htm>

<Thu muc 1/file B.htm>

Example

**file B has a link to file C, so in file B,
there is an HTML element:**

link to C

URL =

<http://127.0.0.1/demo/Thu muc 1/>

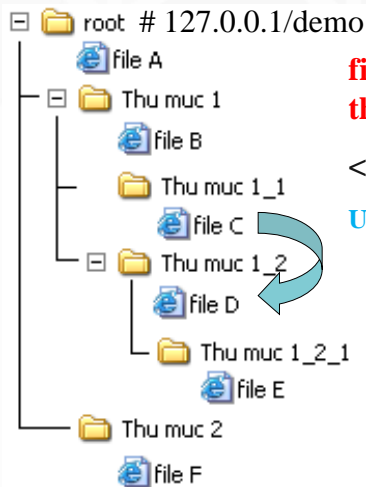

[Thu muc 1_1/file C.htm](http://127.0.0.1/demo/Thu muc 1/Thu muc 1_1/file C.htm)

[/demo/Thu muc 1/Thu muc 1_1/file C.htm](http://127.0.0.1/demo/Thu muc 1/Thu muc 1_1/file C.htm)

[./Thu muc 1_1/file C.htm](http://127.0.0.1/demo/Thu muc 1_1/file C.htm)

[Thu muc 1_1/file C.htm](http://127.0.0.1/demo/Thu muc 1_1/file C.htm)

Example

**file C has a link to file D, so in file C,
there is an HTML element :**

link to D

URL =

<http://127.0.0.1/demo/Thu muc 1/>

[Thu muc 1_2/file D.htm](http://127.0.0.1/demo/Thu muc 1_2/file D.htm)

[/demo/Thu muc 1/Thu muc 1_2/file D.htm](http://127.0.0.1/demo/Thu muc 1/Thu muc 1_2/file D.htm)

[../Thu muc 1_2/file D.htm](http://127.0.0.1/demo/Thu muc 1_2/file D.htm)

[../Thu muc 1_2/file D.htm](http://127.0.0.1/demo/Thu muc 1_2/file D.htm)

Example

root # 127.0.0.1/demo

**file D has a link to file F, so in file D,
there is an HTML element :**

link to F

URL =

<http://127.0.0.1/demo/Thu muc 2/file F.htm>

</demo/Thu muc 2/file F.htm>

[../Thu muc 2/file F.htm](http://127.0.0.1/demo/Thu muc 2/file F.htm)

[../Thu muc 2/file F.htm](http://127.0.0.1/demo/Thu muc 2/file F.htm)

Example

root # 127.0.0.1/demo

**file F has a link to file E, so in file F,
there is an HTML element :**

link to E

URL =

http://127.0.0.1/demo/Thu muc 1/ Thu muc 1_2/Thu muc 1_2_1/file E.htm

/demo/Thu muc 1/Thu muc 1_2/

[Thu muc 1_2_1/file E.htm](http://127.0.0.1/demo/Thu muc 1/Thu muc 1_2_1/file E.htm)

[../Thu muc 1/Thu muc 1_2/Thu muc1_2_1/](http://127.0.0.1/demo/Thu muc 1/Thu muc 1_2/Thu muc1_2_1/)

[file E.htm](http://127.0.0.1/demo/Thu muc 1/Thu muc 1_2_1/file E.htm)

Example

root # 127.0.0.1/demo

file E has a link to file A at a specified location, so in file A, there is an HTML element:

``

`link to A at position B`

[../../../../file A.htm#positionB](#)

Contents

- ☐ Introduction to HTML

- ☐ Basic Tags
- ☐ List Tags
- ☐ Link Tags
- ☐ **Table**

Simple Table

```
<table border="1" width="100%">
  <caption>Bảng HTML đơn giản</caption>
  <tr>
    <th>0.1</th>
    <th>0.2</th>
  </tr>
  <tr>
    <td>1.1</td>
    <td>1.2</td>
  </tr>
  <tr>
    <td>2.1</td>
    <td>2.2</td>
  </tr>
</table>
```

Bảng HTML đơn giản

| 0.1 | 0.2 |
|-----|-----|
| 1.1 | 1.2 |
| 2.1 | 2.2 |

Table Tags

| Tag | Description |
|--------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <code><table></code> | Defines the beginning of a table |
| <code><caption></code> | Provides a caption or title for the table |
| <code><tr></code> | Defines a table row |
| <code><th></code> | Defines a table header cell. It is used to represent column or row headers. |
| <code><td></code> | Defines a table data cell. It contains the actual content of the table, such as text, numbers, or other HTML elements |
| <code><thead></code> , <code><tbody></code> , <code><tfoot></code> | These elements group rows into table header, body, and footer sections, respectively. They help structure the table content and can be used for styling or JavaScript purposes |

 **Giá vàng 9999**
ĐVT: tr.đ/lượng

| Loại | Mua | Bán |
|------|--------|--------|
| SBJ | 31,520 | 31,540 |
| SJC | 31,490 | 31,560 |

Some attributes of the tags

| Attribute | Description |
|--------------------|---------------------------------------------------------------|
| colspan | Specifies the number of columns the cell should span |
| rowspan | Specifies the number of rows the cell should span |
| bgcolor | Sets the background color of the row / cell |
| align | Aligns the content of the row / cell horizontally |
| valign | Aligns the content of the row / cell vertically |
| cellpadding | Specifies the space between the cell content and cell borders |
| cellspacing | Determines the space between cells |

Example: colspan - rowspan

```
<table border="1">
  <tr>
    <th>Name</th>
    <th colspan="2">Telephone</th>
  </tr>
  <tr>
    <td>Bill Gate</td>
    <td>(505) 256-3600</td>
    <td>0844 41 45 387</td>
  </tr>
</table>
```

| Name | Telephone | |
|-----------|---------------|----------------|
| Bill Gate | (505)256-3600 | 0844 41 45 387 |

```
<table border="1">
  <tr>
    <th>Name</th>
    <th>Telephone</th>
  </tr>
  <tr>
    <td rowspan="2">Bill Gate</td>
    <td>(505) 256-3600</td>
  </tr>
  <tr>
    <td>0844 41 45 387</td>
  </tr>
</table>
```

| Name | Telephone |
|-----------|----------------|
| Bill Gate | (505)256-3600 |
| | 0844 41 45 387 |

Combining colspan and rowspan

```
<table border="1">
  <tr>
    <th>Name</th>
    <th>Telephone</th>
    <th>Country</th>
    <th>Center</th>
  </tr>
  <tr>
    <td rowspan="2">Bill Gate</td>
    <td>(505) 256-3600</td>
    <td colspan="2" rowspan="3">silicon valley - usa</td>
  </tr>
  <tr>
    <td>0844 41 45 387</td>
  </tr>
  <tr>
    <td>Steve Job</td>
    <td>1-800-676-2775</td>
  </tr>
</table>
```

| Name | Telephone | Country | Center |
|-----------|----------------|----------------------|--------|
| Bill Gate | (505)256-3600 | silicon valley - usa | |
| | 0844 41 45 387 | | |
| Steve Job | 1-800-676-2775 | | |

Setting the background color for the table

```
<table border="1" width="100%" style="background:red">
  <caption>Bảng HTML đơn giản</caption>
  <tr>
    <th>0.1</th>
    <th>0.2</th>
  </tr>
  <tr>
    <td>1.1</td>
    <td>1.2</td>
  </tr>
  <tr>
    <td>2.1</td>
    <td>2.2</td>
  </tr>
</table>
```

| Bảng HTML đơn giản | |
|--------------------|-----|
| 0.1 | 0.2 |
| 1.1 | 1.2 |
| 2.1 | 2.2 |

Setting the background color for a row

```
<table border="1" width="100%">
  <caption>Bảng HTML đơn giản</caption>
  <tr>
    <th>0.1</th>
    <th>0.2</th>
  </tr>
  <tr style="background:red">
    <td>1.1</td>
    <td>1.2</td>
  </tr>
  <tr>
    <td>2.1</td>
    <td>2.2</td>
  </tr>
</table>
```

Bảng HTML đơn giản

| 0.1 | 0.2 |
|-----|-----|
| 1.1 | 1.2 |
| 2.1 | 2.2 |

Setting the background color for a cell

```
<table border="1" width="100%">
  <caption>Bảng HTML đơn giản</caption>
  <tr>
    <th>0.1</th>
    <th>0.2</th>
  </tr>
  <tr>
    <td style="background:red">1.1</td>
    <td>1.2</td>
  </tr>
  <tr>
    <td>2.1</td>
    <td>2.2</td>
  </tr>
</table>
```

Bảng HTML đơn giản

| 0.1 | 0.2 |
|-----|-----|
| 1.1 | 1.2 |
| 2.1 | 2.2 |

Setting the background color for a column

```
<table border="1" width="100%">
  <caption>Bảng HTML đơn giản</caption>
  <tr>
    <th style="background:red">0.1</th>
    <th>0.2</th>
  </tr>
  <tr>
    <td style="background:red">1.1</td>
    <td>1.2</td>
  </tr>
  <tr>
    <td style="background:red">2.1</td>
    <td>2.2</td>
  </tr>
</table>
```

Bảng HTML đơn giản

| 0.1 | 0.2 |
|-----|-----|
| 1.1 | 1.2 |
| 2.1 | 2.2 |

Special child elements of Table

| Tag | Description |
|-------------------------|-------------------------------------------------------------------------------------------------|
| <caption> | This element is used to provide a title or caption for the table |
| <colgroup> | The <colgroup> element allows you to group columns together and apply common attributes to them |
| <col> | <col> elements within <colgroup> can be used to specify individual column properties |

| Monthly savings | |
|-----------------|---------|
| Month | Savings |
| January | \$100 |
| February | \$50 |

| ISBN | Title | Price |
|---------|---------------|-------|
| 3476896 | My first HTML | \$53 |
| 2489604 | My first CSS | \$47 |

| ISBN | Title | Price |
|---------|---------------|-------|
| 3476896 | My first HTML | \$53 |
| 2489604 | My first CSS | \$47 |

Tag <caption> - <col>

```
<table border="1">
  <caption>iPhone Price</caption>
  <col style="background-color:#09F" />
  <col style="background-color:#F30" />
  <tr>
    <th>Type</th>
    <th>Price</th>
  </tr>
  <tr>
    <td>iPhone 3GS - 8GB</td>
    <td>$99</td>
  </tr>
  <tr>
    <td>iPhone 4G - 16GB</td>
    <td>$199</td>
  </tr>
  <tr>
    <td>iPhone 3GS - 32GB</td>
    <td>$299</td>
  </tr>
</table>
```

iPhone Price

| Type | Price |
|-------------------|-------|
| iPhone 3GS - 8GB | \$99 |
| iPhone 4G - 16GB | \$199 |
| iPhone 3GS - 32GB | \$299 |

Tag <colgroup>

```
<table border="1">
  <colgroup span="2" style="background-color:#09F" />
  <colgroup style="background-color:#F30" />
  <tr>
    <th>Type</th>
    <th>Price</th>
    <th>Made in</th>
  </tr>
  <tr>
    <td>iPhone 3GS - 8GB</td>
    <td>$99</td>
    <td>USA</td>
  </tr>
  <tr>
    <td>iPhone 4G - 16GB</td>
    <td>$199</td>
    <td>USA</td>
  </tr>
  <tr>
    <td>iPhone 3GS - 32GB</td>
    <td>$299</td>
    <td>USA</td>
  </tr>
</table>
```

| Type | Price | Made in |
|-------------------|-------|---------|
| iPhone 3GS - 8GB | \$99 | USA |
| iPhone 4G - 16GB | \$199 | USA |
| iPhone 3GS - 32GB | \$299 | USA |

Guidelines for table structure

| Tag | Description |
|---------|----------------------------|
| <thead> | Grouping table header rows |
| <tbody> | Grouping main content rows |
| <tfoot> | Grouping table footer rows |

| Month | Savings |
|----------|---------|
| January | \$100 |
| February | \$80 |
| Sum | \$180 |

| Month | Savings |
|----------|---------|
| | % |
| January | \$100 |
| February | \$80 |
| Sum | \$180 |

Example

```

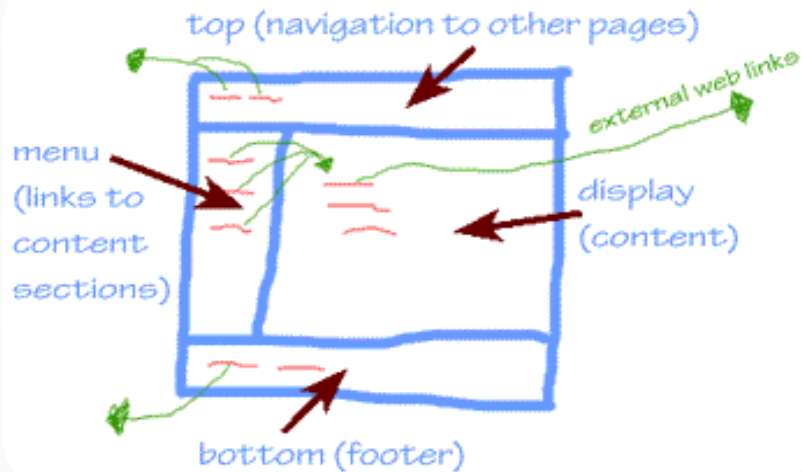

<table border="1" width="100%">
  <caption>Bảng HTML đơn giản</caption>
  <thead style="background-color:Red">
    <tr>
      <th>0.1</th>
      <th>0.2</th>
    </tr>
  </thead>
  <tfoot style="background-color:Blue">
    <tr>
      <td>3.1</td>
      <td>3.2</td>
    </tr>
  </tfoot>
  <tbody style="background-color:Green">
    <tr>
      <td>1.1</td>
      <td>1.2</td>
    </tr>
    <tr>
      <td>2.1</td>
      <td>2.2</td>
    </tr>
  </tbody>
</table>

```

Bảng HTML đơn giản

| 0.1 | 0.2 |
|-----|-----|
| 1.1 | 1.2 |
| 2.1 | 2.2 |
| 3.1 | 3.2 |

Layout website - Table

Some useful attributes

- ☐ autofocus
 - ☐ `<input type="text" autofocus="" />`
 - ☐ Automatically move the cursor to the last HTML element with the 'autofocus' attribute when the web page is opened
- ☐ placeholder
 - ☐ `<input type="text" placeholder="Email Address" />`
 - ☐ Display a placeholder text inside the textbox to suggest the content to be filled in.
- ☐ spellcheck
 - ☐ `<textarea spellcheck="true"></textarea>`
 - ☐ Enable or disable spell check.
- ☐ maxlength
 - ☐ `<input type="text" maxlength="20" />`
 - ☐ Limit the number of characters that users can enter.
- ☐ contenteditable
 - ☐ `<p contenteditable="true"></p>`
 - ☐ Allow changing the content inside an element with the 'contenteditable' attribute.

Contents

- ☐ *Introduction to HTML*
- ☐ *HTML Document Structure*
- ☐ *Basic Tags*
- ☐ *List Tags*
- ☐ *Link Tags*
- ☐ *Table*
- ☐ **Assignment**

Assignment

- ☐ Use the knowledge you've learned to create a web page displaying your team's information, including:
 - ☐ A group photo (illustration is sufficient)
 - ☐ Detailed team information including team name, list of members, and genders
 - ☐ Use an image map so that clicking on a member's face will navigate to the member's information page

Assignment

- ❑ The content of the member information page, includes:

- ❑ Avatar
- ❑ Full name
- ❑ Gender
- ❑ Date of birth
- ❑ Email
- ❑ Phone
- ❑ Link back to the team information page

Assignment

- ❑ File and folder structure of the submission:
